Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Species I: Claims 1-21 directed to a method for transferring circuit elements comprising the steps of providing an original substrate with a release member disposed upon a surface of the original substrate, defining individual elements whereas the elements having a conical frustum-shaped configuration, fabricating a first set of electrically conductive contacts on a surface of the elements, freeing the elements by removing the release member, defining receptors, and forming a second set of electrically conductive contacts wherein the second set of electrically conductive contacts being concentrically disposed rings defining space therebetween and being arranged so as to match the first set of electrically conductive contacts.

Species II: Claims 22-34 directed to a method for fabricating electronics comprising the steps of freeing individual elements from a seed substrate and using gravitational forces and vibrational energy to place the individual elements in receptors formed in a different substrate.

2. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thao P Le whose telephone number is 703-605-1187. The examiner can normally be reached on M-T (8:00-6:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Nelms can be reached on 703-308-4910. The fax phone numbers
